DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-21, drawn to a multi-parameter water quality monitoring system with plural multi-parameter monitoring tools with sensor head components, communicating over a network, and a central controller.

Group II, claim(s) 22-29, drawn to a method of measuring oxygen in liquid.

Group III, claim(s) 30-37, drawn to a multi-parameter monitoring system with microprocessor communicating with plural sensors connectable over unactivated circuit, and high impedance buffer device.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The invention of Group II includes at least measuring oxygen in liquid not required of the other groups. The only feature in common is a sensor between Group II and Group I which is not considered new in the art.

The inventions listed as Groups I and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The invention of Group III includes at least a microprocessor communicating with plural sensors connectable over unactivated circuit, and high impedance buffer device not required of Group I. The only feature in common between the two groups is a multi-parameter monitoring system which is not considered new in the art.

The inventions listed as Groups II and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The invention of Group III includes at least a microprocessor communicating with plural sensors

connectable over unactivated circuit, and high impedance buffer device not required of Group I. The only feature in common between the two groups is a sensor which is not considered new in the art.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or III and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.
